EXPERIENCE

Accenture

Austin, Texas

Tech Architecture Analyst

September 2025 - Present

- Built a Node.js/MCP tool that queries live incident data via SQL, with configurable current and historical P1–P3 windows, and generates branded executive PDF reports with KPIs, severity breakdowns, and recurring trends.
- Deployed production SLOs and observability dashboards for 10+ enterprise apps using Dynatrace, dtctl, and GitHub-managed YAML, validating thresholds against 30/60/90-day production telemetry.
- Diagnosed latency SLO volatility in a flagged application, traced it to interval-average binarization with too little threshold margin, and delivered a clear remediation path.
- Built 5 Excel VBA automations with Microsoft Copilot, saving 100+ hours of manual work, and contributed skill and context files to a shared GitHub Copilot knowledge base using branch and rebase workflows.
- Supported a large-scale go-live across 11 workstreams (cutover, hypercare, real-time issue triage) and onboarded new team members on environment setup, GitHub Enterprise, and VS Code.

DevelopIQ

Fayetteville, Arkansas

Lead Developer

January 2025 - June 2025

- Built mobile-responsive layouts for the React landing page of a startup's real-estate parcel search platform (map-based search with Mapbox, parcel boundaries, zoning, and owner data), expanding access for mobile users.
- Developed the landing page's About Us and product information sections using React and CSS.

Accenture

Bentonville, Arkansas

Tech Architecture Summer Analyst (Software Engineering Intern)

June 2024 - August 2024

- Built a Java backend feature for one of the world's leading retailers' contact center AI that identifies callers by phone number, retrieves their recent purchases, and routes them into a returns conversation about those orders.
- Developed Java logic that gathers customer account details from a caller's phone number and connects it to the retailer's in-house Google Dialogflow-based conversational front end.
- Helped migrate the team's conversational AI application from a legacy version of its Dialogflow-based platform to the new version, reducing costs and improving developer productivity.
- Collaborated on a ~10-person engineering team to test and debug backend services and conversation flows, resolving issues to improve reliability.

PROJECTS

AI Incident Triage Assistant | Python, FastAPI, SQLAlchemy, OpenAI API

Live demo: jamaribenologa.com/triage | GitHub

- Built a backend service where an LLM agent classifies IT incidents, scores urgency, writes summaries, and recommends next actions by choosing its own tool calls, with results stored and served through a filterable REST API.

Portfolio Desktop OS | JavaScript, HTML/CSS

jamaribenologa.com/desktop

- Built a browser-based desktop from scratch with no frameworks: a window manager (drag, resize, minimize, z-order stacking), a tabbed browser, a terminal that answers portfolio commands, and a phone layout.

A* Pathfinding Visualizer | JavaScript, p5.js

jamaribenologa.com/a-star

- Built an interactive visualizer with an octile-distance heuristic and a binary-heap open set; editing walls after a search re-runs it instantly so the shortest path updates live.

EDUCATION

University of Arkansas

Fayetteville, Arkansas

B.S. in Computer Science

August 2022 - May 2025

- GPA: 3.48
- Related Coursework: Data Structures & Algorithms, Objects & Design, Computer Organization & Programming, Object-Oriented Programming

SKILLS

Languages: Java, Python, JavaScript, TypeScript, SQL, C++, HTML/CSS

Frameworks & Libraries: React, Node.js, FastAPI, SQLAlchemy, Google Dialogflow, React Native (Expo), p5.js

Developer Tools: Git, GitHub Enterprise, GitHub Copilot, VS Code, IntelliJ, Linux/WSL, Jira

Observability & DevOps: Dynatrace (DQL, dtctl), SLOs, Incident Management, MCP Integrations
